

MY HAPPY PLANTS

ONCE UPON A TIME THERE WAS A PROJECT GROUP THAT DECIDED TO DO A DESKTOP APPLICATION

Start page:

When you are completely new to the application you won't see any plants. And therefore you should go to the search bar in the upper right corner.

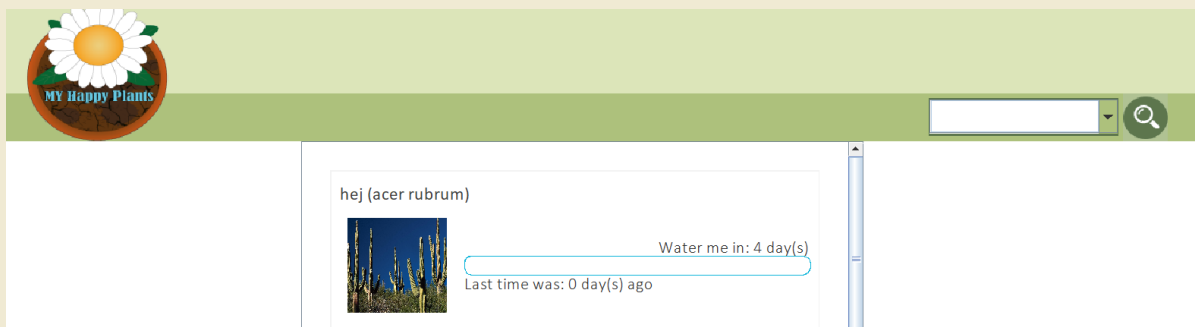

There you type in the name of the plant/s you have at home.
which will take you to the add a plant page.

Add plant page:

Here you will see information about your plant and a button named add.
once you press that button you will come to the create plant page.

Create plant page:

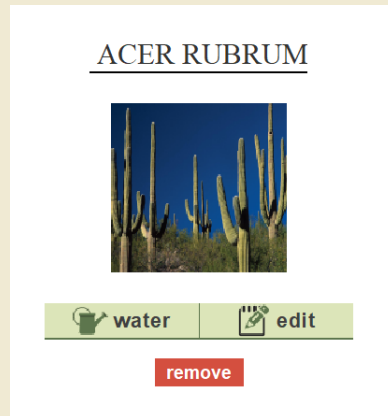

Here you will have the opportunity to personalize your plant and add features to its care. Remember to save! ;)

And this time you will see your plant at the start page as per this example.

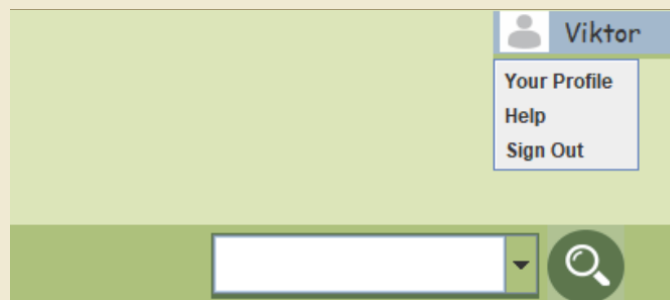

Interact with your plant:

Now when you press your plant you will notice that a new panel is showing at your right center. Here you can water, edit and delete.

Menu bar:

As you see your name being displayed above the search bar you can press it and a drop down menu will appear. In which you will see several items, one being the item "your profile".

If you press "your profile" this will take you to the profile page.

Profile page:

Here you will be able to gaze upon your personal information, and if you feel for an edit you just press the edit button which will make it possible for you to edit your personal details.

WE WISH YOU THE MOST PLEASANT OF TIME AND A LOT OF
HAPPY PLANTS ;)
